
nQueue Billback to Showcase Information Accountability at ILTA's Annual Conference

"iA" Designed to Improve Efficiency, Profitability for Law Firms

Tempe, Ariz., August 17, 2009 – nQueue Billback LLC announced today that it will be featuring its iA (Information Accountability) product suite at the International Legal Technology Association's Annual Educational Conference on August 24-27, 2009. iA is designed to help law firms capture, process and understand expense data and act on that understanding to improve efficiency and profitability.

"Our products, of course, help our clients capture all expense information and recover those costs, including many transactions that do not typically take place at a multi-function device," said John Gilbert, Vice President Sales and Marketing at nQueue Billback. "iA, more importantly, is designed to provide data our clients can use to better understand their operations and make better decisions." nQueue Billback's four pillars of value are "Cost Recovery," "Expense Management" to help a firm trim its own costs; "Workflow" to increase firm efficiency and productivity; and "Business Intelligence" to improve profitability and overall decision making.

iA is a product of the recent merger between nQueue and Billback and is the result of combining the best elements of each one's technology. nQueue Billback offers world-class technology that can be embedded directly into multi-function devices or reside on tablet computers or terminals. "nQueue and Billback each built excellent development teams, and the combination provides our clients with the easiest to use, most flexible and most complete product on the market," said Rick Hellers, nQueue Billback's President and CEO.

"We are especially pleased to be exhibiting at ILTA," added Hellers. Even prior to the merger, both nQueue and Billback were longtime supporters of ILTA, and Hellers was a founding member of the organization, which for more than 30 years has been the world's leading peer networking organization in support of legal technology.
