
nQueue Billback Partners with Omtool to Provide “iA Scan Powered by AccuRoute”

*Strategic Partnership Provides nQueue Billback Clients with
Award-Winning Document Capture and Handling Platform*

Tempe, Ariz. and Andover, Mass., October 21, 2009 – nQueue Billback LLC, in partnership with Omtool™ (OMTL.PK), announced today that they will advance their “Next Generation” integration with Omtool’s AccuRoute® document capture and handling solution to provide “iA Scan Powered by AccuRoute.” iA Scan Powered by AccuRoute allows nQueue Billback customers to automatically capture, process and deliver scans directly from their multi-function devices while simultaneously capturing cost recovery information. This customized solution was jointly created by nQueue Billback and Omtool for a tightly integrated cost recovery and scanning solution that will be exclusively available from nQueue Billback.

Omtool’s AccuRoute is the industry-leading document handling platform for capturing, converting and distributing paper and electronic documents. It leverages server-based software and uses special routing rules to handle scanned documents. iA Scan Powered by AccuRoute will enable nQueue Billback users to create on-the-fly scan directives or access these routing instructions directly at a multi-function device or enterprise scanner. “We are pleased to be offering our clients AccuRoute’s award-winning functionality,” said Richard P. Hellers, President and CEO of nQueue Billback. “Our clients will have the benefit of Omtool’s 10-plus years of research and development and have the unique opportunity to deploy an industry leading technology as one of the core components of iA Scan technology.”

Information Accountability, or iA, increases accuracy and understanding of data, improving efficiency through cost recovery, expense management, workflow and business intelligence. iA Scan Powered by AccuRoute supports this approach as more documents are getting scanned rather than copied, and the information about these scans can provide powerful insight into a firm’s expenses and operations. In addition to potentially recovering the costs related to scanning, such as staff time and server space, iA Scan Powered by AccuRoute allows firms to better manage document workflows to improve efficiency, productivity and profitability throughout the firm, while also reducing paper and supporting green initiatives.

nQueue Billback and Omtool are both known for offering world-class technology. “Our relationship with Omtool allows us to provide our clients with two best-of-breed solutions,” said Peter Morris, Chief Technology Officer at nQueue Billback. “Omtool’s scan routing engine combined with our software, which can be embedded directly into multi-function devices or reside on tablet computers or terminals, allows for instant collection of data and routing and management of scanned documents, right from the MFD.”

“We have always valued our relationship with nQueue Billback and their mission of helping their clients capture all expense information, recover costs and use information to make better decisions,” said Karen G. Cummings, Executive Vice President, Sales and Marketing at Omtool. “It only makes sense to be able to scan documents and perform cost recovery in one easy step and we look forward to helping nQueue Billback clients accomplish this goal.”
